

Gatineau/Kanata/Winona – October 1, 2007

Award recognizes a Canadian “Most Promising” Energy and Clean Technology

The 5th Annual Rice Alliance Energy & Clean Technology Venture Forum was held, Thursday, September 27, 2007 at Rice University, Houston Texas. As many as 60 energy-related technology companies were selected to give a presentation. This opportunity provided companies with visibility and exposure to potential investors, customers and strategic partners.

There were 5 awards given to the companies with the “Most Promising” technology and Tadger Group International, a Canadian-based company received one of the five awards.

The Rice Alliance for Technology and Entrepreneurship is Rice University's flagship initiative devoted to the support of technology entrepreneurship. Its mission is to support the creation of technology-based companies and the commercialization of new technologies.

Tadger Group International, based in Winona ON, was invited to participate and showcase the Tadger, a Canadian emission reduction and fuel saving technology, which continues to accumulate data suggesting and demonstrating (particularly with trucking companies) that its product is capable of dramatically reducing emissions, while improving fuel economy.

John Mogford, President of Tadger Group International seen here with Canadian Consulate representative, Maria Bofill, accepted the reward with pride.

The following is an excerpt of John Mogford's presentation at the Forum.

“ Any of us that owns, operates or leases a vehicle is being impacted by global warming, smog alerts and rising fuel costs. However in 1989, a Native American, Doug Scouten, created an ingenious way to manipulate the fuel structure resulting in improved combustion.

The product Doug invented is a true plug-and-play technology known as the TADGER. This is a maintenance-free solution that reduces all greenhouse gases up to 20% without any side effects, complements all ethanol and bio fuels and reduces fuel consumption up to 7% where savings provide a typical 1 year return on investment.

Tadger Group International has notable North American clients such as Mullen Trucking, Newmont Gold, NAPA and the largest Anhauser-Busch Distributor. Our product is 1 of 28 that has been certified and endorsed by the Ministry of Energy Utilization for use in all of China.

Today our technology is commercially available in 30+ countries. Our company has averaged 26% revenue growth over the last 3 consecutive years. We are seeking capital and partners to expand into additional foreign markets.

This is a NOW solution”.

For more information about the Tadger, please visit TGI's website at www.tadgergroup.com or the website of the exclusive Canadian distributor of the Tadger in Canada at www.envirotek.homestead.com.
